Experiment No 7

a) difference between function and Procedure

⇒

Parameter	Function	Procedure
Return value	Must return exactly one value using the Return clause	May or may not return a value
Return clause	Mandatory	Not required
call Method	called inside SQL expressions, SELECT statements, or assignments	called using EXECUTE/EXEC or CALL from the SQL prompt, or by name from within another procedure
Purpose	Designed for computation that produce a single result	Designed to perform one or more specific tasks or operations.
Usage in SQL	can be used directly in a SELECT statement	cannot be directly used in a SELECT statement.
Parameters	Supports IN parameters; OUT and INOUT are generally avoided	supports all three, namely IN, OUT and IN OUT parameters.

standalone Usage	can be part of an Expression	Must be called as a standalone statement.

Q2 Write a syntax of creating function and procedure

⇒ Function :-

1) Syntax : CREATE [OR REPLACE] FUNCTION function_name
[(parameter_name [IN | OUT | IN OUT] type [, ...])]
RETURN return_datatype
IS
BEGIN
<function_body>
RETURN value;
END [function_name];

2) Example :- CREATE getsalary (empid IN NUMBER)
RETURN NUMBER
IS
sal NUMBER;
BEGIN
SELECT salary INTO sal FROM employee
WHERE employee_id = empid
RETURN sal
END getsalary;

SELECT getsalary(101) FROM dual;

Sundaram
FOR EDUCATIONAL USE

Procedure:-

1) Syntax:-

```
CREATE [OR REPLACE] PROCEDURE proc_name[list of
parameters]
IS
    Declaration section
BEGIN
    Execution section
EXCEPTION
    Exception section
END;
```

2) Example:-

```
CREATE PROCEDURE updatesalary (empid IN NUMBER,
newsal IN NUMBER)
IS
BEGIN
    UPDATE employees SET salary = newsal WHERE
    employeeid = empid;
    COMMIT;
EXCEPTION
    WHEN NO_DATA_FOUND THEN
        DBMS_OUTPUT_PUT_LINE('Employee not found.');
END updatesalary;
EXECUTE updatesalary(101,75000);
```
